1888

TABLE OF CONTENTS, VOLUME XII.

EDITORIAL.

APRIL.—THE TITLE PAGE OF OUR ELEVENTH VOLUME—error by the printer—our correction, and new title page—list of contributors to that volume—our thanks to those pioneers of American veterinary literature—efforts to render the REVIEW accessible to all—our future prospects—the REVIEW, born of the United States Veterinary Medical Association, has always paid its relative its respects—at times severe, but always just—the meetings in New York, Boston, Philadelphia and Baltimore—the last one probably the most useful and interesting of all—paper from Dr. Salmon on hog cholera—his claim—discovery of distinct diseases—European observation and discoveries coincide with the investigations made in America—Dr. Clement's handsome exhibition of specimens of pleuropneumonia lesions—their specific value at the various stages of the disease—paper on mediate contagion—Dr. Salmon's remarks—Prof. Law's answer to Dr. Gadsden—our suggestion on the subject seconded. Director Nocard's request—the fifth international veterinary congress to be held in September, 1889—the congress on tuberculosis to take place this year, in July—our confreres on this continent can become members and receive the publications of both by a small remittance to the treasurer of both. Two new veterinary journals, the *Ercolani* and the *Giornale di Veterinaria Militare*.

MAY.—AMERICAN VETERINARY REVIEW PRIZE—Let us once again call the attention of veterinarians to it—our object—*original work* is what we want—an essay of real originality and genuine merit—not so much quantity as quality—our selected committee will look not only after the value of the papers as contributions to veterinary literature, but also after their merits as indicating original research and experiment—two papers already on hand—extension of time for entry of papers. SWINE PLAGUES.—Why not gather them under the same name as Prof. Walley did of bovine plagues—amount of writings about them—why not put them all under one head—but after all we know that they represent three affections, rouget or rothlauf, hog cholera or infectious pneumo-enteritis and diphtheria of swine, and swine plague or schweineseuch—what is wanted—a vaccine for each—one is already known for rouget—let us have another. MEDIATE CONTAGION IN PLEURO-PNEUMONIA.—Dr. Salmon's answer to Dr. Gadsden—this paper was read at the United States Veterinary Medical Association meeting at Baltimore—with the letter of Prof. Law it gives Dr. Gadsden material for reflection. VETERINARY DERMATOLOGY.—Dr. Gotthiel's translation—its value to the English readers of veterinary pathology—the subject more or less ignored and well worthy of closer study and attention, even at the hands of the faculties of veterinary colleges. DIAGNOSIS IN DOUBTFUL CASES OF GLANDERS.—One of the most difficult

diseases to diagnosticate under some special conditions—means to help the veterinarian—inoculation—auto-inoculation—the donkey, the dog, guinea pig and the rabbit used for that purpose—glanders is a virulent disease—it is the function of a living being—the presence of the microbe made out by cultivation—the *potato* as the best ground for culture—Dr. Nocard's experiments—the importance of the application to positive diagnosis. FIFTH INTERNATIONAL VETERINARY CONGRESS.—Our notice of the appeal to foreign veterinarians—let the profession of the United States heartily respond to the call.

JUNE.—VETERINARY PROFESSION.—A paper read by Dr. W. Y. Williams before the Ohio State Veterinary Medical Association—importance of the paper—it treats of the uniformity in veterinary education by the various schools—the same subject under the consideration of the U. S. V. M. Association—Dr. Hoskin's labor and the credit he deserves—his report—all the schools say they approve of it—importance of that *all*—the new announcements of the various colleges in North America—the anxiety of the would-be student. PLEURO-PNEUMONIA IN NEW YORK.—A decision adverse to the work of the Bureau of Animal Industry—tagging objected to by one owner of cattle is sustained by the court—danger that might have arisen from that judicial action—but it is ended by prompt action of the Bureau, which obtains new power and assistance from the State—the proclamation of Governor Hill—now the work will go on more smoothly than ever. THE JOURNAL OF COMPARATIVE PATHOLOGY AND THERAPEUTICS.—The fourth recent addition to the ranks of veterinary journals—talented editorial management—a promising editorial number—our best wishes.

JULY.—SPINAL MENINGITIS OR INFECTIOUS PARAPLEGIA.—The contribution of Mr. Comeny to the *Recueil*—the theory he advances—spinal meningitis is well known to American veterinarians—it presents in its usual form but little new interest in all but its etiology—we have through it parasitic—a change in our past opinion—Mr. Comeny considers it as such—he calls it our epizootic infecto-contagious paraplegia—it is infectious, can we consider in contagious?—observations do not prove it—urine is the seat of culture of the germs—urinary apparatus is the place of admission in the organism—why are mares more affected?—question is open to discussion—many objections to it—an opportunity for pathologists and bacteriologists. FIGHTING CONTAGIOUS PLEURO-PNEUMONIA.—The work done—the number of animals infected—those diseased destroyed—the post mortem—the cost—and in the end good results—stamped out. VALUE OF VETERINARY SCIENCE TO THE STATE.—A lecture delivered by Dr. A. Peters—an important subject well treated before an appreciative audience. AMERICAN VETERINARY COLLEGE.—Recent action of the Board of Trustees—a special Act of the Legislature in its favor—new departure in the college—change in the Faculty—Prof. C. B. Michener's resignation.

AUGUST.—THE REGULATION BY LAW OF THE PRACTICE OF VETERINARY MEDICINE IN THE STATE OF NEW YORK.—The need for it gradually felt for years—attempts and failures following each session of the Legislature—the cause—divisions in the ranks of the veterinarians—union is necessary for success—the two inimical societies at last act together—the result is the passage of a bill by the Legislature of 1886—the telegram sent to Dr. Pendry—the work of registration

begins—the discovery—disappointment among almost all—the “liberals” do not object—the game of the postal card—terrible results of the mutilation of the bill—Hon. J. B. Shea, of the Assembly, comes to the rescue—his efforts in behalf of the profession—the amendment to the law—section 2 no longer as it was—this time quackery is doomed—but veterinarians must watch. **EFFECTS OF LIGHTNING ON HORSES.**—The subject rather lightly treated in veterinary works—few cases on record, except the fatal ones—the case of Pancoast—his recovery slow but sure. **GOVERNMENTAL AID TO FRENCH VETERINARY SCHOOLS.**—The difference between the doings of European and American governments—shall we ever see similar action in the United States?

SEPTEMBER.—**FIRST INTERNATIONAL CONGRESS ON TUBERCULOSIS.**—Initiated by a veterinarian, it is organized by Prof. Verneuil—its importance—gathering of scientists, comparative pathologists, physicians and veterinarians—almost all Europe represented—even the United States—veterinarians for the first time admitted to equal rights—admission made by Prof. Verneuil—Chauveau is President of the Congress—a compliment to the profession he represents as well as to the scientists—veterinarians of France can realize the advantages of this recognition—thanks to the veterinary profession by Prof. Verneuil—the reports of the Congress will be published later on. **SURGICAL INTERFERENCE IN LARYNGEAL PARALYSIS PRODUCING ROARING.**—A tedious affection that no one cares to encounter—difficulties of positive pathology—principally laryngeal, however—Gunther's attempt for its relief—publication in the *Veterinary Journal* of July—four operations indicated—they are simple—all are preceded by one for the opening of the larynx—this is of great value—assisting in a positive pathological diagnosis—it is harmless—the larynx is no more *terra incognita*. **ANTIRABIC INOCULATION OF HERBIVOROUS ANIMALS.**—Pasteur's investigations followed by others—Prof. Galtier, of the Lyons school, one of the first—his labors and achievements cannot be ignored—Pasteur's treatment objectionable and difficult to the ordinary practitioner—intra-venous injection is simple—and as certain—the experiments of Galtier confirmed at the Pasteur Institute—all veterinarians ought to try it—good results obtained—it will protect all ruminants—perhaps the horse—experiments to be made. **OUR PRIZE.**—We are prepared to fulfil our engagements—let the committee report. **SPECIAL BACK NUMBERS.**

OCTOBER.—**TO OUR READERS.**—Conception of the American Veterinary Review—its incubation, birth, nursing and rearing—its growth and object—necessity of a large circulation—means to obtain it—the subscription reduced from four to three dollars a year. **UNITED STATES VETERINARY MEDICAL ASSOCIATION.**—Its organization at the Astor House in 1863—the quarter of a century anniversary in 1888—the meeting at the Rossmore Hotel—but few of the original members present—about forty out of nearly two hundred of the actual membership answer the call—meeting good when compared with preceding ones in New York—two good papers read, but not discussed—the committee on tuberculosis—the meetings in New York always failures when compared with others—a remedy wanted. **LEGISLATION AND MEDICAL EDUCATION.**—The paper of the counsel of New York State and County Medical Societies—veterinary medicine ignored—an oversight, certainly—veterinarians ought to appeal for an equality of consideration in the

matter. **ANTIFEBRINE OR ACETANILID.**—Dr. J. C. Meyer's, Sr., paper before the Ohio State Veterinary Medical Association—a good example that veterinarians ought to follow. **ANTIRABIC INOCULATION OF DOGS.**—The discovery of Prof. Galtier—Pasteur's method has too many difficulties for its application—the recent investigation at Pasteur's laboratory—dogs can also be inoculated the same way that herbivorous animals are—simple mode of preparation of the vaccine matter.

NOVEMBER.—THE REVIEW PRIZE.—The report made by the Chairman, Prof. Huidekoper—majority of four—"Studies of a Cattle Disease hitherto ill understood" wins the prize—Dr. P. Paquin the successful candidate—the course is yet open—same offer for the coming year—looking forward to more competition. **IS CASTRATION VETERINARY SURGERY?**—The importance of the question—serious interests involved in the answer—how the question arose—charges of a learned justice—a case of prosecution—who is to prosecute in States where the profession is protected by law?—our opinion on the subject—affirmative, of course—as much as any other specialty—as much as obstetrics or orthopedy as branches of human medicine—is the verdict a just one?—would an appeal be more favorable? **MATERIAL FOR THE REVIEW.**—Liberality of our friends—Dr. Williams on "Maladie du Coit"—Dr. J. C. Meyer, Sr., on "Enzootic Meningitis of Cattle"—Dr. Klensch on "Rattleweed or Loco Disease." **CALIFORNIA STATE VETERINARY SOCIETY.**—Its organization—its difficulties—our wishes and hopes for its success—let us hear from it. **SPECIAL NOTICE.**—Thanks to some of our friends—remember us to others.

DECEMBER.—LARYNGEAL SURGERY.—It excites much interest in veterinary circles—criticisms severe and uncalled for—Gunther's mode of operation—Stockfelt's—Professor Möeller's—it is not as new as first supposed—it is not a new field, properly speaking—discovered by the Germans—it is worked to-day by English veterinarians—our experiments—and our failures to relieve—complications that we have observed—let every one report the results they may obtain—both successful and unsuccessful. **A NATIONAL PATHO-BIOLOGICAL LABORATORY.**—Dr. F. S. Billings' new bill—its provisions—is it not a new plan to obtain the National Veterinary School?—if it is, the idea is good—if it is not, our regrets, but our wishes for success all the same. **FIFTH INTERNATIONAL VETERINARY CONGRESS.**—The event coming close to hand—shall American veterinary science be represented?—or will our State and National Societies lose their opportunities?—work which is to be done—names of those who compose the various committees. **ILLINOIS STATE VETERINARY MEDICAL ASSOCIATION.**—The sixth annual meeting—numerous papers of interest—good work done—good example to follow. **SURDITY IN HORSES.**—A case of sudden deafness. **THE SUBSCRIPTION PRICE OF THE REVIEW.**—It is worth the price—or it is not—no more club rates—no reductions except in the future.

JANUARY.—LARYNGOTOMY IN HORSES.—The error of our printers in the last issue—report of our trials—three cases—three failures—the reason: Is it our *modus operandi*?—or what?—the danger of the operation falling into the hands of quacks—how easy imposition can be practiced with regard to it, as evidenced by the case recorded in the *Philadelphia Press*. **THE NATIONAL PATHO-BIOLOGICAL BILL.**—Will it receive the endorsement of the profession?—will it pass Congress?

SWINE PLAGUE COMMISSION.—The answer of the Chief of the Bureau of Animal Industry to the challenge of Dr. F. S. Billings—a petition to the Commissioner of Agriculture—the committee appointed an impartial and well selected nomination—Dr. Salmon's letter. **VETERINARY ASSOCIATIONS.**—Their formation in the East results in their organization in the West—new ones in shape—Indiana—California—our remarks of last month misinterpreted—Dr. Carpenter's letter—societies with more stringent by-laws can now be formed better than at first. **CASTRATION NOT VETERINARY SURGERY.**—Letters on the subject—the REVIEW the servant of the profession.

FEBRUARY.—THE TRIUMPH OF PASTEURISM.—Deserving name used by Dr. Fleming—Pasteur Institute opening—its advantages and objects—public money builds it—and keeps it in working trim—it is not a dispensary for rabies patients—it is for investigation of all contagious diseases—it is a national pathological laboratory—France ahead of all other countries in the encouragement she gives to science. **SWINE PLAGUE AND TEXAS FEVER COMMISSIONS.**—Investigators are not made—but financial help is necessary to them—what of our pathological laboratory—changes in the swine plague commission—it is at work—first at Baltimore, now has gone South—interest in the report—Dr. Klein's remarks on Dr. Salmon. **CRESYL OR CREOLINE AND ESERIDINE.**—New drugs in veterinary pharmacopœia—advantages of cresyl as an antiseptic—experiments in its use. **ESERIDINE.**—Offers advantages over Eserine. **THE REVIEW PRIZE.**—Same committee is reappointed—applications will be received any time—come one, come all. **REGULATION OF THE PRACTICE OF VETERINARY MEDICINE IN PENNSYLVANIA.**—An old bill in an improved form—our wishes for its success—good pleading for the committee in charge of the bill. **CRUELTY TO ANIMALS.**—Dastardly abuse of a professional title—diabolical act punished by well deserved sentence to hard labor—the so-called veterinary surgeon not a member of our profession.

MARCH.—ARE QUADRUPEDS SUBJECT TO HEMORRHOIDAL DISEASE?—A question put by Dr. W. Badenhamer—his negative solution—is it based on Prof. Gothier's observations—our researches on the subject—numerous authorities ignore the disease—it is accepted by a few—our observations—the question is worth the attention of veterinarians—will they help to solve it? **ENZOOTIC BACTERIAN HEMOGLOBINURIA.**—Dr. Paquin's paper on the mad itch or enzootic meningitis—that of Dr. J. Meyer, Sr., on a similar disease—symptoms, lesions and pathological nature of hemoglobinuria—are the three diseases alike? **MEETINGS OF SOCIETIES.**—Kind invitations received which we were obliged to decline—too short time to prepare—no bad excuse—means to remedy—the annual society meetings calendar to be issued in our next number. **SANITARY REPORTS.**—Their advantages—thanks for those received, but more expected. **REFERENCE HANDBOOK OF THE MEDICAL SCIENCES—VETERINARY POST-MORTEM EXAMINATIONS.**—Dr. Clement's excellent article—the subdivision of the subject—work in the laboratory—in the field—modes of procedure—reduction of what is seen—the writing of a report a very important work—the three cases reported an excellent model to follow. **NOTICE.**—The semi-annual meeting of the United States Veterinary Medical Association.

ORIGINAL ARTICLES.

Hog Cholera. A Paper read before the United States Veterinary Medical Association. By D. E. Salmon.....	6
Description of Some Specimens of Pleuro-Pneumonia Contagiosa. Abstract of Remarks at the Semi-Annual Meeting of the United States Veterinary Medical Association at Baltimore, March 20, 1888. By A. W. Clements	20

PAPERS COMPETING FOR THE REVIEW PRIZE.

197	The Intimate Pathological Nature of Parturient Apoplexy. By Ex Facto Jus Obitur.....	57
202	Studies of a Cattle Disease Hitherto Ill Understood. By A. Westerner.....	103

PATHOLOGICAL ANATOMY AND PHYIOLOGY.

350	Bacteriological Researches in Tetanus. By Lampiasi.....	184
552	Upon the Transmission of Infectious Diseases of Miasmatic Contagion. By Messrs. Cadeac and Malet.....	185
248	Etiology of Glanders. By Mr. Loeffler.....	185
255	Experimental Study in the Transmission of Glanders by Median Contagion or by Infection. By Messrs. Cadeac and Malet.....	186
445	The Blood Destroys Bacteria. By Fodor.....	226
303	Of the Power of Microbes to Accommodate Themselves to Antiseptic Media. By G. Kossiakoff.....	227
328	A New Gasiform Bacillus—a Human Parasite. By Arloing.....	227
	On the Transmission of Parasitic Organisms through Heredity. By Max Wolff.....	376
366	Bacteria in Milk. By Loeffler.....	376
392	Experiments on the Transmission of Diphtheria to Animals. By F. Penzoldt.....	377
395	On the Passage of Bacilli through the Kidneys. By Fr. Schweitzer.....	378
410	Similarity of Spontaneous and Experimental Tetanus.....	273
439	Repair of Arteries after Ligation. By J. Collins Warren.....	374
488	The Graphic Method for the Study of the Parotid Secretion in the Horse. By Prof. Kaufman.....	509
	Resistance of Rabid Virus to Desiccation and to Cadaveric Decomposition. By Mr. Galtier.....	510
	Introduction of Infections Germs through Intact Skin. By Mr. Schimmelbush.....	511

REPORT OF CASES.

Some Peculiar Terminations of Post-Pharyngeal Abscesses in Solipeds. By L. C. Wakefield.....	129
A Singular Case of Cramps Lasting Four Days without Intermission. By the Same.....	132
Gastrotomy in a Rooster. By W. R. Howe.....	132
Vesico-Urethral Calculi. By the Same.....	133
Open Joints—Their Treatment. By C. F. Flynn.....	135
Esophagotomy. By G. W. Butler.....	136
Impaction of the Rumen. By the Same.....	137
Abscess in the Brain, the Result of Strangles. By the Same.....	137
Abnormal Retention of the Fœtus—Momification. By W. H. Gribble.....	173
Temporary Deafness as a Sequel to Pharyngo-Laryngitis. By Roscoe R. Bell.	275
Hysterocele. By F. D. Hinebauch.....	276
Pilocarpine and Physostigmine. By the Same.....	277
Eversion of the Bladder. By Thomas W. Scott.....	278
Compound Fracture of Radius in Two year-old Filly—Amputation and Recovery. By C. C. McLean.....	371
A Case of Dystokia. By C. H. Peabody.....	425
The Horse's Tail as an Antiseptic Atomizer. By P. Peters.....	427
One of the Causes of Secondary Hemorrhage. By the Same.....	427
Intestinal Invaginations. By Dr. T. J. Turner.....	428
Filaria Capillosa or Oculi. By M. Francis.....	429
Intestinal Calculi. By C. H. Peabody.....	462
Scrotal Hernia. By the Same.....	463
Elaterium in Hydrothorax. By P. Peters.....	464
Experiments with Eserine. By R. T. Whittlesey.....	557

AMERICAN VETERINARY COLLEGE—HOSPITAL DEPARTMENT.

Fistulous Tract of the Neck in a Setter—Rabiform Manifestations—Singular Cause of the Trouble. By G. A. Lathrop.....	174
A Few Foot Cases. By M. W. Tritschler.....	175
Fatal Fracture of a Small Metatarsal Bone—Suppurative Synovitis. By M. W. Tritschler, House Surgeon.....	223
New Growth of a Melanotic Tumor in a Bay Horse. By G. A. Lathrop, House Surgeon.....	225
Compound Comminuted Fracture of the Temporal and Comminuted Fracture of the Sphenoid Bone. By G. A. Lathrop.....	369
After-effects of Neurotomy on a Punctured Wound of the Foot—Sloughing of the same—Death. By Tritschler.....	370
Four Cases of Laryngotomy. Dr. Fleming's operation for the cure of Roaring. By W. Tritschler.....	459
A Case of "Break-Down" in a Fore and Hind Leg. By Dr. W. Tritschler	511
Fracture of the Acetabulum, Dislocation, Shortening of the Limb. By the Same.....	513

EXTRACTS FROM FOREIGN JOURNALS.

Narcotism Simulating Typhoid Fever—Produced by <i>Papaverus Rhœas</i> . By M. L. Trasbot.....	83
Epithelial Cancerous Growth of the Chest of the Horse. By Messrs. Weber and Barrier.....	84
Traumatic Pericarditis. By Mr. Marion.....	86
Abnormal Retention of Fœtus—Momification. By E. Lavignac.....	178
Urethrotomy in a Steer. By M. Bouchet.....	179
Rabiform Symptoms in a Dog, following the Perforation of the Duodenum by two Tapeworms. By M. Cadeac.....	179
Contribution to the Study of Melanosis. By T. Mauri.....	180
Treatment of Warts, Melanotic Tumors, Fibroma, Sarcoma and other growths, with Arsenious Acid. By M. Lignon.....	181
Large Epiploic Tumor in a Bitch—Antiseptic Laparotomy—Recovery. By Prof. Degive.....	182
Double Inguinal Hernia, one Chronic, the other Acute, in a Gelding. By F. Hendrickx.....	183
Apoplectic Cerebral Shock in a Horse. Rupture of the Rachidian Bulb. By M. L. Magnin.....	228
Hemorrhagic Diathesis in the Horse. By M. J. Thomassen.....	229
Rabies and Pseudo-Rabies in the Dog. By F. Hendrickx.....	230
Symptomatic Peculiarities in a Case of Rabies Developed by Intra-Cranial Inoculation. By the Same.....	231
Fatal Peritonitis Following the Accouplement in a Cow. By M. Duranton	232
Paraplegia in the Horse. By Mr. Ripert.....	233
Treatment of Septic Metritis by Uterine Irrigations. By the Same.....	233
Contribution to the Treatment of Tetanus. By M. A. Trinchera.....	234
The Cause of Dislocation of the Patella. By M. V. Lari.....	235
Employment of the Stomach Pump in the Treatment of Dogs. By F. W. Turner.....	279
Ferment in Oats, and their Effect on Digestion. By the Same.....	281
Buccal Abscess due to the presence of a Needle. By Mr. Haan.....	332
Rabiform Symptoms in Gastritis of Cattle. By Mr. Detroye.....	333
Use of Snow in Veterinary Practice. By Mr. Repiquet.....	333
Neuromatous Diathesis in a Cow. By Mr. Ch. Morot.....	334
Large Calculous Mass in the Bladder of a Horse. By L. Soula.....	379
Urinary Calculus and Cancer of the Bladder in a Mare. By A. Labat.....	379
Osteomalacia in a Mare. By L. Soula.....	380
Strangulated Inguinal Hernia in a Gelding. By Mr. Borie.....	381
Tœnia in the (Esophagus and Kidneys of a Dog—Rabid Symptoms. By M. Wolpert	561
Enormous Fibroma and Invagination of the Floating Colon in a Steer. By G. Furlanetto.....	562
Spontaneous Rupture of the Primitive Aorta—Sudden Death. By the Same	562
A Case of Palpitation of the Aorta. By the Same.....	563
A Case of Sciatica in the Horse. By the Same.....	564
Arthralgia of Cows Recently Delivered. By Prof. Dessart.....	564

- Contribution to the Study of Aneurismal Tumors. By Mr. Ed. Godfrin..... 565
 Chronic Tympanitis, resulting from Hypertrophy of the Pectoral Lymphatic Glands. By M. J. Darieux..... 566

BIBLIOGRAPHY.

- Treatise on the Non-Microbian Parasities Diseases of Domestic Animals (a Traité des Maladies, Parasitaires non-Microbiennes des Animaux Domestiques). By Prof. L. G. Newmann..... 284
 New Dictionary of Veterinary Medicine, Surgery and Hygiene. (Nouveau Dictionnaire de Medecine, Chirurgie et Hygiene Veterinaire). By H. Bouley..... 285
 Swine Plague, its Causes, Nature and Prevention. By F. S. Billings..... 381
 Trattato di Tecnica e Terapeutica Chirurgica Generale e Speciale Degli Animali Domestici del Dott. N. Lanzillotti Buonsanti..... 429

FIFTH INTERNATIONAL VETERINARY CONGRESS.

- Appeal to Foreign Veterinarians..... 91
